6 Months of Hands-On Training
Module 1: Trades Background
Module 2: Marine Electrical
Module 3: Marine Electronics
Module 4: Marine Propulsion
Module 5: Marine Systems

ABYC Certifications:
Marine Systems Certified
Marine Electrical Certified
Marine Diesel Engines Certified

NMEA Certifications:
Marine Electronics Installer Certified

---

The Panel

Throughout the program, student teams build free-standing and complete panels that contain most of the important and essential systems that go into modern boats.

Student panels are a progressive effort which encompass all aspects of classroom learning. In the end, students are able to visually show off the skills they have mastered throughout the program.

“The skills taught at IYRS are extremely transferable, from learning how to properly sharpen an edge tool to learning how to capture a complicated shape onto a seemingly plain piece of scrap wood. I learned a new way to think about and approach problems.”

Kevin Mc Kiernan, IYRS Alumnus & Systems Instructor
